

# Gyprom 480 SL

DRAFT LABEL APPROVED SUBJECT TO SUBMISSION OF FINAL LABEL AND PACKAGE VALID FOR 3 MONTHS ONLY

**DESCRIPTION:** GYPROM 480 SL is a systemic and non-selective post emergence herbicide for the control of a wide variety of annual, biennial and perennial grasses, sedges, broad leaved weeds and woody shrubs. It can be used in plantation crops, grassland and non-crop land.

**RECOMMENDATION FOR USE:** To avoid performance reduction, application should be avoided if rains are likely to pour within 6 to 8 hours after application. Spray when weeds are 30-60cm tall and before seeding or flowering. Gyprom should be applied on mature weeds before they flower and seed. Avoid windy weather as drift onto desirable vegetation or green plant parts can result in severe injury or destruction.

**MODE OF ACTION:** It is a post-emergence herbicide absorbed through the foliage and translocated rapidly from aerial parts to underground roots, stolons, tubers or rhizomes of perennial weeds. Control of annual weeds begins as soon as the chemical penetrates the tissues. Leaf symptoms appear within 7 to 14 days after application and complete desiccation usually within 30 days.

## APPLICATION RATE:

CROP	DOSES/HA/400 L	DOSE/ 20 WATER
Non- Cropped area for Maize Planting	3 litres/ha	150 ml/20 litres of water Covering 500 m <sup>2</sup>
