**General Information**

Requir® Prime EC is for use as a foliar applied insecticide to control red spider mites on roses, thrips and whiteflies in french beans and whiteflies on tomatoes.

**Mode of action**

Requir® Prime EC breaks down rapidly and will form localised volatiles following foliar application. It has several positive modes of action: the direct action of the product and the volatile components have a non-toxic activity that works by temporarily softening insect cuticles leading to a disruption in cell function. The volatiles can cause disruption of respiration causing insect death, insects that are more active or have larger spiracles are likely to be more affected by the volatiles.

**Directions for use: Use as directed**
